INTEGRATED INTERFACE: generator control, table positioning and image processing in a single monitor

*Radiographic fluoroscopic R/F system “all-in-one”...
...more than a simple remote-controlled table!*

- ✓ **FLEXIBLE:** with a single system you have a complete examination room
- ✓ **ERGONOMIC:** the cantilevered table top with adjustable height for total access to the patient and minimum height from the ground to 45 cm
- ✓ **RELIABLE:** high image quality with dose reduction
- ✓ **FAST:** extended range of tests also for patients on stretcher with direct positioning on the detector
- ✓ **INNOVATIVE:** thanks to all motorized movements, it is possible to make projections normally not reachable from a standard remote-controlled table with a single detector
 - ✓ Complete operation both with patient on the tabletop and in direct contact with the detector
 - ✓ Easy execution of side projections with a single detector
 - ✓ Longitudinal, cross and lateral scanning with the X-ray tube always aligned with the detector without patient repositioning
 - ✓ Self-positioning of the X-ray tube separate from the detector, with de-centralized ray
 - ✓ Fully integrated patient positioning camera in the collimator
 - ✓ Removable autofocusing grid
